

NEXUS EXECUTIVE REPORT

DATABASE METRICS: 11 LIVE OPERATIONS LOGGED

Report ID: eea94fa0
Generated: 2026-09-15 09:14 UTC
Classification: STRICTLY CONFIDENTIAL

Executive Summary

This document serves as an automated post-action report following a simulated cyber warfare campaign. The following data details the adversarial threat exposure, Blue Team SIEM detection rates, and active mitigation performance.

1. Project Overview & Architecture

NEXUS (Neural Exploitation and eXplainable Unified Security) is a strictly isolated, autonomous cyber-warfare simulation matrix. The platform pits an ensemble of highly specialized, LLM-driven adversarial agents against a self-evolving SOC (Security Operations Center). The SOC combines dynamic SIGMA rule generation, graph-neural-network anomaly detection, and active threat mitigation protocols. This intelligence report details the co-evolutionary adaptation of both offensive and defensive systems over the course of the simulation.

2. Tactical Deployment Details

The simulation stress-tested the defensive architecture across 3 manual tactical engagements, simulating thousands of distinct behavioral artifacts. In total, the adversarial Red Team deployed MITRE ATT&CK techniques 17916 times. The most heavily utilized operational vector was technique T1078, demonstrating the attackers' preference for exploiting structural vulnerabilities in the simulated enterprise environment. The following telemetry data rigorously quantifies the exact effectiveness of these tactical deployments.

3. Recent Agent Performance (TELEMETRY EXTRACTS)

This table details detection performance for the most recent operations with full JSON telemetry exports.

Operation	F1	Precision	Recall	Total Attacks
Op 1	1.00	1.00	1.00	30
Op 2	1.00	1.00	1.00	12
Op 3	0.38	0.23	1.00	48
Op 4	1.00	1.00	1.00	12
Op 5	1.00	1.00	1.00	12

NEXUS EXECUTIVE REPORT

Op 6	1.00	1.00	1.00	30
Op 7	0.92	0.86	1.00	12
Op 8	0.90	0.81	1.00	30
Op 9	1.00	1.00	1.00	30
Op 10	1.00	1.00	1.00	30
Op 11	1.00	1.00	1.00	30

4. MITRE ATT&CK Tactic Effectiveness

Technique	Uses	Evaded	Evasion Rate	Detection Rate
T1210	1	1	100.0%	0.0%
T1204	1	1	100.0%	0.0%
T0001	1	1	100.0%	0.0%
T1078	5897	2686	45.5%	54.5%
T1071	3537	1267	35.8%	64.2%
T1003	1642	547	33.3%	66.7%
T1059	3226	508	15.7%	84.3%
T1083	1915	175	9.1%	90.9%
T1021	1059	35	3.3%	96.7%
T1486	538	6	1.1%	98.9%
T1055	99	1	1.0%	99.0%

5. SIGMA Rule Evolution Log

The Evolution Engine actively synthesizes new SIGMA detection rules in response to zero-day adversarial behaviors. The campaign started with 10 baseline rules and concluded with 10 active rules, representing the autonomous generation of 0 new behavioral heuristic(s) over the course of the live operations.

Rule count per operation:

- Operation 1: 10 rules
- Operation 2: 10 rules
- Operation 3: 10 rules
- Operation 4: 10 rules
- Operation 5: 10 rules
- Operation 6: 10 rules

NEXUS EXECUTIVE REPORT

- Operation 7: 10 rules
- Operation 8: 10 rules
- Operation 9: 10 rules
- Operation 10: 10 rules
- Operation 11: 10 rules
